

# SDI Camera Cable Connection Warning

\*\*\*\*\* **Extremely Important**\*\*\*\*\*

## Important Notice Regarding Warranty

Do not connect any camera cable to the FHD4, FHD4W or FHD4C High Definition DVR while the DVR is powered up, or while any of the LED indicator lights are illuminated, or you will VOID the Warranty of the FHD4 DVR. This is not a design defect of the DVR, but a industry cable limitation.

## Required Camera Cable Connection To DVR Procedure

- Remove all power from the DVR.
- Check the LED indicator lights to make sure they are not illuminated.
- Connect Camera Extension cable to the camera optical head.
- Then & only then connect camera Extension cable to DVR.

Those who fail to read this warning, and or fail to follow “Required Camera Cable Connection To DVR Procedure” will be liable for the entire cost of repairs to the DVR as well as all non-warranty related shipping costs.

## HD-SDI Camera Cable Sourcing

HD-SDI DVRs require coaxial cable with impedance of 75ohm or you will damage the DVR. The only way to insure customers are using the correct SDI camera cables is to require HD-SDI camera cables be sourced direct from ABV only. Use of non-ABV sourced camera cables of unverified integrity will void the warranty of the DVR.
