

Note regarding Video File Samples:

These video file samples are converted screen movies from a iMac, so you can see the entire GUI and features and controls.

Keep in mind when you make a Screen movie capture the video quality does not suffer much from the copy process, the audio however is played through speakers on the rear of the iMac and then captured through the tiny mic on the front, so there is considerable audio quality loss and some audio feedback because the speakers are very close to the microphone. In the dedicated free video player for the SD4HD & SD4HW systems "DVR_Player" playback the audio is quite good except for the bus noise.

PC will play the MP4 files in Windows Media Player

Mac OSX will play the MOV files in QuickTime

Both will play MKV files with VLC (Video Lan Corporation) free universal video player

AMERICAN BUS VIDEO
