Choosing "Set Config To DVR" can configure the DVR by choosing configuration files.

Choosing "Get Config From DVR" can obtain DVR configuration and save as files. It is used for copying

configuration to other DVR.

Choosing "Upgrade DVR" can upgrade DVR network by selecting upgraded files.

Choosing "Restart DVR" can reset DVR through network.

Choosing "Add DVR" can add DVR by manual operation.

If you need automatic download, please choose Menu "Setup"→"Local Setup" →"Other Setup", Click "Auto Download File":

Find the DVR in the "DVR List". It will auto connect, and then auto download the record files. The default download path is "my document".

Before using "ViewPro", please make sure DVR connects with PC. You can connect through Network Cable, Router or Wi-Fi, but must ensure Ping successfully.

If it connects through Wi-Fi, please make sure configure Wi-Fi Module in PC successfully. Then connect DVR with Wi-Fi. If it has succeeded, connection is OK. Configuration steps are as follows:

- 1. Connect Wi-Fi module to a PC's USB and LAN ports;
- 2. Run "autorun.exe" included on CD with the Wi-Fi module. If the operation system of your PC is Win 7

on your desktop. Double-click this icon to run the software, select

your Wi-Fi bridge from the list and click "Next":

3. After that, you will find

ONETS			
	WIFI-Bridg	e Setup 5.0.	. 16
	Select WIF	I-Bridge dge on Network	Refresh List
Select your WIFI-Bridge from	Name	Mac Address	Click the Refresh list
the list and click Next.	00-17-13-10-b6-4c	00-17-13-10-b6-4c	button to find WIFI-Bridges that have recently been added to the netowrk.
		B	ack Next Exit
802.11B/802.11G WIFI-	Bridge	Setup Wiza	rd Model:VAP11G

4. Select a wireless network to connect to:

	<u>-75</u>					
	Ch	100se a Wi	ireless	Netw	vork

For example, if you select the "ES_LINK_TENDA" to connect to, press "Next", input the ascii code of your password in hex format. You can look up the ascii code of your password in the ascii table (Addenda 1). For example, if your password is "hello", you should input 68656c6c6f in "Key1", then press "Next" to

finish.

If now your PC could access to internet through this Wi-Fi module, it means the Wi-Fi module has been debugged well. You can remove the Wi-Fi module from your PC, and connect to DVR's USB and LAN ports, power on the DVR. Meanwhile, please find a PC within the same LAN, start to Ping the DVR, and see whether the DVR could be connected to the same wireless network or not. Note: After connecting the Wi-Fi module to DVR, normally it takes 6~7 minutes to ping through the PC. The defaulted IP address is 192.168.0.220. If this is not with the same network segment of router, you're required to change the IP). If the DVR is ping through the computer, it means it is connected to the same wireless network, and you can control it on software.
