## SD4mX Setting Alarm Recording & Searching by Alarm

The SD4mX can be set to search for "Alarms" and we can set one of the 3 External Trigger wires to activate an alarm, thus easily be identified as soon as the program opens or search by "ALARM" only.

Process is not complex;

Go to "Alarm" menu, select Trigger 1, set "TIP" (Text in Picture) to RVC for rear vision camera. Select Action "CH1" this will cause the Rear Vision Display to go full screen when the driver is backing.

When the vehicles return: Pull SD card. Open AVPlayer. Search for "Alarm" The AVPlayer program will show all Back up actions on the timeline bar graph in RED. You then move the pointer below the RED bar and a "+" symbol will pop hop, permitting you to expend the time bar, so you can then see the detailed Red bars. Select the one you want to play / display or just count them if that was important.

If you wish to see all recorded vide along with Alarm, just search "All Video" and Blue & Red lines will be prevented.

See images attached, and try to overlook the clutter; we have not had a break in business or vacation since January of last year. Not complaining, living the dream, just allot of projects piling up, no time to clean up the shop.
