

3rd Party Players Require “Legacy” AVI file Video Codecs

The AVI file type was introduced in 1992 by Microsoft but replaced by the WMV proprietary file type compression format and has not been officially supported by Microsoft for more than 11 years. Most codecs associated with this file type are "legacy" and may or may not be supported on current platforms/operating systems.

SD4m DVRs offer a “Composite” setting that creates AVI files for the user. AVI video files can be viewed on Third Party Players that have codecs to support the AVI file type.

PCs with Windows Media Player version 12:
should play files w/o any additional software.

Apple Mac OS OSX10.6 with MPlayerX
should play files without problem.

PCs & Macs may require a third party AVI Video Player as some versions of Windows Media Player & QuickTime lack codec's to play compressed AVI files.

Third Party Solutions for AVI file playback

Easy Media Player v1.1.12 for Windows Free download
<https://www.download-free.com/easy-player>

MPlayerX for Mac OS X v10.6 or later Free download
<http://mplayerx.org/>

Dedicated AVPlayer Video File Support Free

All SD4m systems come with complimentary Stand Alone dedicated Video Player Program named AVPlayer, designed specifically to support the SD4m video/audio/GPS and trigger event files.

The best Video Player for viewing SD4m files is on the AVPlayer on PC or on Mac running Parallels or Boot Camp.

Manufacturer Provided SD4m Dedicated Video Player
